# When Deployment Turns into DevOps Headaches

## The Current Reality

Infrastructure inefficiencies cost each developer over **100 days per year**, with **40% of their time** spent on non-coding tasks.

Increasing cloud complexity slows delivery and delays time-to-market. Meanwhile, competitors accelerate with standardized deployments, releasing features faster and capturing market share.

## Industry Perspective

- **40% of development time** is lost to infrastructure instead of building features.
- **Hiring DevOps Engineers** is hard, so companies push app developers to infrastructure.
- Investing in Developer Experience results in a **77% faster time-to-market**.

## Why this can't wait

- **Time:** Two days a week, your best engineers create zero customer value.
- **Competition:** While you fight complexity, competitors win market share.
- **Finance:** Developer time and cloud spend leaking away, stealing productivity and profit.

## What's possible with Multistax

### +70% Team Productivity

Automate infrastructure and focus on development.

### +60% Faster Deployment

Streamline delivery cycles and deploy faster.

### -50% Operational Costs

Cut operational costs in half and accelerate innovation.
